

Ethereum Price Forecasting Using Facebook Prophet

- Summary statistics
  - o Minimum Price = 1429.100830
  - o Maximum Price = 3631.928955
  - o Average Price = 1979.977549

Time Series ETH

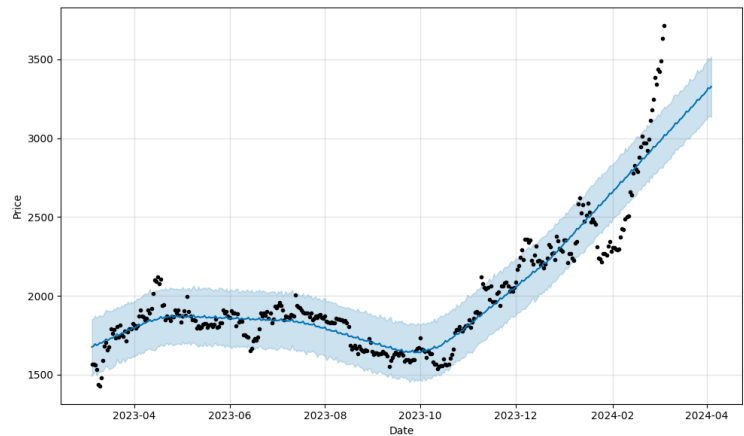

- Facebook Prophet model
  - o Total number of rows = 367
  - o Yhat value of the LAST five rows.
    - 3286.504548
    - 3298.442677
    - 3318.122692
    - 3315.348712
    - 3327.018029

397 rows x 16 columns

- Predicted values with the actual values of Ethereum.

**Interpret the Prediction chart:**

- Where can you find your predicted value on the graph?
  - The Blue Line represents predicted values.
- Where can you find the actual values on the graph?
  - The Black plots.
- Do you think your model fit the data well?
  - The model fits the overall trend well. The blue line captures the general direction of the Ethereum prices in the upward and downward trend. But some actual prices deviate from the forecast during the rapid price increase. To conclude, the model is useful in predicting for a long-term trend.
